

## CHEMICAL PROCESSING Chemical processing industry

The chemical processing industry is continuously evolving in the manufacture of basic chemicals, while for the past 10 years the chemical processing market has been one of the fastest growing markets internationally. Together the result has been an unending need for improvements in quality, efficiency, safety, and environmental responsibility.

Electricfor understands. With new advanced chemical processing technology development comes the need for thermal technologies required to support it. Electricfor will assist you in identifying and implementing the best advanced thermal technology solutions to help you achieve improved productivity, optimize the performance and life of critical equipment, increase process uptime, help reduce costs and waste, improve safety, and support cost-effective regulatory compliance.

Click on the red hotspots below to see how our products are used.

Electricfor is ready. Whether it is a refurbish or new construction, from start to finish, our design, engineering, manufacturing, installation, commissioning, and service and support team will be with you every step of the way to ensure speedy completion and continued successful results.
